

NMPA Mountain Flying Clinic

Returns to Santa Fe

The acclaimed New Mexico Pilots Association Mountain Flying Clinic will be held again in Santa Fe, September 29 - October 1, 2017. The Clinic, held at the New Mexico Army National Guard facility on the Santa Fe airport, starts with an eight-hour ground school on Friday covering the tools necessary to understand and plan for the unique and rewarding challenges of mountain flying. The 2017 curriculum includes mountain flight planning, aircraft performance, mountain weather, aeromedical factors, risk management & survival, mountain communications, and mountain flight maneuvers. This year's clinic includes regionally and nationally recognized instructors George Slad, Michael Szczepanski, Craig Stapleton, Chuck Grosvenor, Dr. Tom Navar, Bill Hill, and Cliff Chetwin.

New Mexico high country-Truchas Peak area

Saturday offers an optional flight opportunity with a highly experienced mountain flying CFI over spectacular mountainous terrain, through mountain passes, and landings at several high-altitude airports. Successful completion of both the Friday ground school and the Saturday optional flight will meet the flight review requirements of 14CFR61.56. Credits under the FAA WINGs Pilot Proficiency Program are available and some insurance companies will provide discounts for participating in this safety clinic.
